

4. Glass recycling banks

Aim:

To provide glass recycling facilities in local communities, with the aim of diverting recyclable material from landfill. To make sure the sites are emptied at regular intervals, keeping them from overflowing and maintaining them in a clean and useable state for customers

What you get:

Glass recycling facilities for clear, brown and green glass all over the city.

What we don't do:

Recycling banks for other recyclable materials

How can customers help us?

By suggesting potential sites within the community that might be suitable for glass recycling banks.

Leaving the site clean (taking away plastic bags and cardboard boxes.)

By putting the correct type of glass in the correct bank

Telling us about any untidy sites, particularly those that are overflowing.

Target:

To ensure that in 95% of all cases there will be adequate space for you to deposit your recyclable materials at each location.
